## Presentation

Extensive knowledge about the internet and the IT business in general. Including experience as a CTO in a listed company, CTO in a startup and Chief developer with a leading IT-company.

While working as Head of development/Team Manager, I have been in charge of a long range of projects, ranging from weeks to years in timeframe and often several projects at a time. In the role as CTO, I have been responsible for planning, implementing and maintaining everything IT related, while also handling a team of up to 20 developers, located in Copenhagen, Bangkok and a few other locations.

I have had the opportunity to work with high load data-driven websites, fast paced development cycles and time critical development coordination with several direct partners. Partners include Lycos, Bloomberg, Saxo Bank and a range of shipping companies. This have taught me the importance of including both IT and business into the everyday planning, managing changes and handling unforeseen incidents in a successful manner.

For the greater part of my career I have been worked using agile and prototyping methods, but my experience also includes using a SCRUM/KanBan combination.

My work include large international portals (millions of users, 7 countries), global big data SaaS solutions, advertising systems (100+ million ads per month) with full featured real time CRM, text messaging systems, investment games, CMS-system and corporate websites.

Working with development and IT in general, is more than just work for me. Managing IT-teams, choosing the right IT strategy and development some of my biggest personal interests. Reading about ways to improve performance in a database, or acquiring information about how other companies are run, are a natural part of my daily life.

## I am looking for

A company who can benefit from my project management skills, IT knowledge and getting stuff done-attitude! I am used to working in fast paced, fast changing environment, where the demands and the technology often changes. Preferably combined with a workplace in an informal setting.
